Abstract

A potential luminescent sensor, based on porous metal organic framework (MOF) for the detection of metal ions (Al^{3+} , Fe^{3+} or Cr^{3+}) and nitro explosive, 2,4,6-tri-nitrophenol (TNP) has been identified. The cadmium(II) containing mixed-linker MOF viz. $\{[Cd(L_1)(L_2)](DMA)_n\}$ (L_1 = 2-amino-1,4-benzenedicarboxylate, L_2 = 4,4'-azopyridine and DMA = *N,N*-dimethylacetamide) has been prepared employing the solvothermal method using L_1 and L_2 in DMA medium. Single crystal X-ray diffraction analysis revealed $\{[Cd(L_1)(L_2)](DMA)_n\}$ is crystallized in orthorhombic system with space group *Cmca*. $\{[Cd(L_1)(L_2)](DMA)_n\}$ features an interpenetrated 3D framework structure consist of pendant Lewis basic $-NH_2$ groups directed towards the pores. Thermogravimetric analysis revealed that the desolvated framework compound is stable up to 350 °C under nitrogen atmosphere. Furthermore, porosity of the desolvated $\{[Cd(L_1)(L_2)](DMA)_n\}$ has been investigated through N_2 , H_2 and CO_2 adsorption studies as well as sorption of water vapour. $\{[Cd(L_1)(L_2)](DMA)_n\}$ exhibits superior selective turn on sensing towards tri-positive metal ions (Al^{3+} , Fe^{3+} , Cr^{3+}) and luminescence quenching behavior towards nitroaromatics with high selectivity.

COVER STORY

A STUDY ON THE IMPACT OF COVID-19 LOCKDOWN ON SHARE PRICE OF SELECTED INSURANCE COMPANIES IN INDIA

Abstract

In this article a study has been carried out to show the impact of Covid-19 lockdown on the share price of insurance companies in India and also to show the percentage change in the share prices of the selected insurance companies. To perform this study, three companies from the insurance sector have been taken and the daily price data of the selected companies has also been collected for a period of 28 days. The Covid-19 lockdown was announced on 24th March 2020. Data of 14 days before the announcement of lockdown and 14 days after the date of lockdown announcement have been considered in this study. To make an analysis and to find out the impact, statistical tool like Paired t-test has been used and it has been found that there is no significant impact of Covid-19 lockdown on share price of insurance companies.

INTRODUCTION

The insurance sector is an important part of the Indian financial system. It plays a significant role in the development of Indian economy from providing protection coverage of an individual life to providing aid in the formation of capital for the Indian financial system. On 24th March 2020 a nationwide lockdown was announced by our Hon'ble Prime Minister, Narendra Modi to fight against the spread of Covid-19. Due to such lockdown and its subsequent extensions many sectors of the economy and ultimately the economy of the country itself had been affected. The gross domestic product (GDP) rate, foreign direct investments (FDI), consumer price inflation (CPI), education system,

www.ijemai.in

revenue collection, securities market, employment rate, poverty rate etc, have all been affected due to the lockdown. It has been witnessed that various sectors such as banking, construction, automobile, pharmaceuticals, textiles, steel, agriculture, insurance, etc have all been affected due to the lockdown. Therefore, a study was carried out focusing mainly on the insurance sector and its share price movement so as to bring out the impact of Covid-19 lockdown on the insurance sector.

RESEARCH OBJECTIVE

The objectives of this study were to:

1. find out the impact of Covid-19 lockdown on share price of insurance companies and
2. find out the percentage change in share price of selected insurance companies before and after the lockdown.

HYPOTHESIS

We have tested the following hypothesis:

- HD: $\mu_1 = \mu_2$, finds out that there is no significant impact of Covid-19 lockdown on the share price.
HI: $\mu_1 \neq \mu_2$ finds out that there is significant impact of Covid-19 lockdown on the share price.

RESEARCH METHODOLOGY

In this study, data for a period of 28 days has been

Abstract: Borrowing for investment in either physical or human capital promotes growth while that for consumption or debt repayment may lead to so called 'debt-trap' for the households. The present paper probes deeper into the decision-making process of the households regarding choice between these alternative borrowing. The data comes from All India Debt and Investment Survey (NSS 70th round). These methods used are Cragg's Box-Cox double hurdle model and instrumental variable (IV) probit model. Our study shows the decision to borrow for investment purposes depends on such factors as gender, religion, location, education, asset position as well as on the status of financial inclusion of households. The decision to borrow for repayment of existing debt is most prevalent among urban educated households in addition to land-owning rural borrowers.

Keywords: institutional borrowing; capital formation; financial inclusion; inequality; potential debt-trap.

Reference to this paper should be made as follows: Poddar, M., Banerjee, T. and Raychaudhuri, A. (2022) 'What determines the household decision to borrow for investment or repayment of old debt? The Indian story', *Int. J. Information and Decision Sciences*, Vol. 14, No. 1, pp.60-84.

Biographical notes: Moumita Poddar is PhD Research Scholar in the Department of Economics, Jadavpur University. Her areas of interest are microeconomic theory, microfinance, development economics.

Tanmoyee Banerjee (Chatterjee) is a Professor in the Department of Economics, Jadavpur University, Kolkata. Her areas of interest are industrial organisation, microeconomic theory, microeconometrics, microfinance, financial inclusion and gender analysis and economic growth. She has undertaken various empirical research projects funded by national agencies of India like ICSSR, UGC. She has published extensively in reputed international journals.

Ajitava Raychaudhuri is a Professor, former head and coordinator of the Centre for Advanced Studies, Department of Economics, Jadavpur University, Kolkata, India. He was a Senior Fulbright Scholar at Economic Growth Center,

The Traditional Craft of the Membranophones (Leathern Drums) of North Indian Music: A case study of the artisans their folk technology.

Anup Polley

In this article, it has been tried to explain how the drum instruments of Indian subcontinent became upgraded from the primitive shape and how the sound production was enhanced with cognitive development of the music performers. The duff, the khanjari, the tambourine and all drums with open frames were extremely simple in construction. The ancient conical drum 'Pataha' also belonged to that category. There the skin was stretched over a pot which served as a resonator. The membranophonic Percussions such as the Bheri and the Dundubhi were in common use all over India since very early times. These age old percussions still survive in the improvised 'Nāgārā' and its variations. With the passage of time, the archaic barrel shaped wooden drums covered with parchment on both

Abstract

English was the language of industrialization and modernization, and now it is the language of globalization. Mother tongues or regional languages have failed to create market value for themselves and only English sells. English has acquired social value. Knowledge of English is seen to be the key to economic prosperity. Parents, especially those belonging to the middle and upper classes, expect that their children should get the best type of education and they conclude that it is possible only through English medium. People from the lower classes emulate the model-setting behavior of the middle and upper classes. So, we find that the English medium schools are opened everywhere in the countryside!

The perception of the policy makers, the recommendations and guidelines of the educationists and the legal implications of the official guidelines as regards language choice and medium do not jibe well with the perception of the parents. India has the largest middle class and this middle class has demonstrated its desire to go in for English as the medium of instruction. This has led to an incompatibility between the policy and its effective implementation. Like in many spheres of national life, the policy is kept as an ideal, but its implementation is always half-hearted. Most people would like to see that English has an active role in the education of their children.

They want their children to acquire effective skills in English, even as they have some competence in the Indian language of their choice. The problem is compounded by the fact that more and more students prefer to take Hindi or an European language, in lieu of their mother tongues or the dominant language of the state (Times News Network, 2006). Thousands of students come out of schools without knowing how to read and write in their own mother tongue. This is perfectly legal, although it is a tragedy. This worries the state governments who see in it a threat to the identity of the dominant language of the state. The Indian worldview looks at getting jobs abroad as the most important goal of school education. This has added to the complexity of the situation.

Key words: Three Language Formula, Multilingualism, Mother Tongue.
