CRITERION 1- CURRICULAR ASPECTS

1.1 Curricular Planning and Implementation

1.1.1. The Institution ensures effective curriculum planning and delivery through a well-planned and documented process including Academic calendar and conduct of continuous internal Assessment

DOCUMENTS – PART 2 Planning for Curriculum Delivery

1. Feedback from College to the University of Burdwan regarding curriculum
2. Images of e-materials supplied by faculty members to students.
3. Photographs of Practical work of Different lab-based departments.
4. Library support and e-learning
5. Class test under Continuous Internal Evaluation (CIE).
6. Parents-Teachers Meeting under Continuous Internal Evaluation (CIE).
7. College Internal Examination Schedule
8. Sample Images of Marks upload in University of Burdwan web portal

Summary of Feedback submitted on curriculum to University of Burdwan

KATWA COLLEGE
(Affiliated to the University of Burdwan)
P.O.: Katwa, Dist.: Purba Bardhaman, West Bengal, 713 130, India
Ref: 696A/Registrar/28
Date- 18/06/2021

To
The Registrar
The University of Burdwan
Burdwan

Subject: Submission of summary of the feedback taken on curriculum from students, faculties and alumni for the session 2020 - 2021

Respected Sir,

This is to bring your kind attention that Katwa College had been taken feedback from its beloved Students, esteemed Faculties and respectable Alumni on the curriculum in the session 2022 - 2023. In this context I am submitting an outline of the feedback received for your kind consideration and necessary action.

The feedback from students revealed that the students are mostly satisfied with the curriculum and allied issues. Although, the feedback showed that there are scopes for modification of curriculum, so as to make it more applicable one for students' seminar.

From the responses received from the Alumni, it was evident that the majority of the alumni considered the curriculum as capable of imparting subject specific knowledge to the students, although, it is noteworthy that a considerable section of alumni seems that, the curriculum requires to be updated to make it more job oriented.

On the teachers' counterpart of feedback, majority of the teachers expressed their overall satisfaction on the present curriculum and thought that the curriculum is able to impart specific knowledge to the students. Whereas, similar to the alumni respondents, many teachers also think that the curriculum requires to be updated to make it more job-oriented. In this connection provisions for more hands-on workouts may be incorporated in the curriculum.

As it's affiliating University, I anticipate your considerate attention towards the findings observed in the responses as mentioned above, and seek humble concern by doing the needful.

Thanking you,
With regards
Principal,
Katwa College

Department of Economics

Introduction

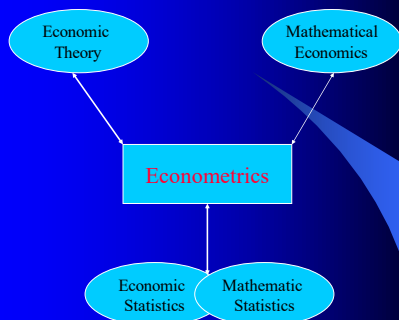

What is Econometrics?

- Definition 1: Economic Measurement
- Definition 2: Application of the mathematical statistics to economic data in order to lend empirical support to the economic mathematical models and obtain numerical results (*Gerhard Tintner, 1968*)

Introduction

What is Econometrics?

- Definition 3: The quantitative analysis of actual economic phenomena based on concurrent development of theory and observation, related by appropriate methods of inference (*P.A.Samuelson, T.C.Koopmans and J.R.N.Stone, 1954*)

Introduction

Methodology of Econometrics

(2) Specification of the mathematical model of the theory

$$Y = \beta_1 + \beta_2 X ; 0 < \beta_2 < 1$$

Y= consumption expenditure

X= income

β_1 and β_2 are parameters; β_1 is intercept, and β_2 is slope coefficients

॥ विद्यया विन्दतेऽमृतम् ॥

Introduction

Methodology of Econometrics

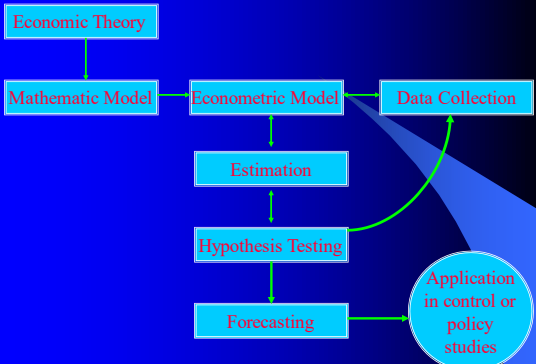

(3) Specification of the econometric model of the theory

$$Y = \beta_1 + \beta_2 X + u ; 0 < \beta_2 < 1;$$

Y = consumption expenditure;

X = income;

β_1 and β_2 are parameters; β_1 is intercept and β_2 is slope coefficients; u is disturbance term or error term. It is a random or stochastic variable

Modern Interpretation of Regression Analysis

- The modern way in interpretation of Regression: Regression Analysis is concerned with the study of the dependence of one variable (**The Dependent Variable**), on one or more other variable(s) (**The Explanatory Variable**), with a view to estimating and/or predicting the (population) mean or average value of the former in term of the known or fixed (in repeated sampling) values of the latter.

Dependent Variable Y; Explanatory Variable Xs

- Y = Son's Height; X = Father's Height
- Y = Height of boys; X = Age of boys
- Y = Personal Consumption Expenditure
X = Personal Disposable Income
- Y = Demand; X = Price
- Y = Rate of Change of Wages
X = Unemployment Rate
- Y = Money/Income; X = Inflation Rate
- Y = % Change in Demand; X = % Change in the advertising budget
- Y = Crop yield; Xs = temperature, rainfall, sunshine, fertilizer

॥ विद्यया विन्दतेऽमृतम् ॥

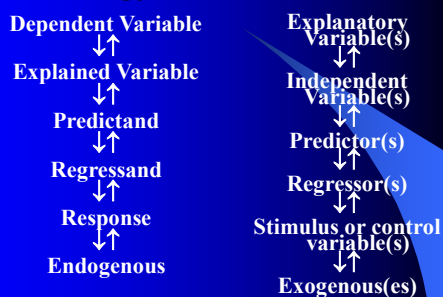

Statistical vs. Deterministic Relationships

- In regression analysis we are concerned with **STATISTICAL DEPENDENCE** among variables (not Functional or Deterministic), we essentially deal with **RANDOM** or **STOCHASTIC** variables (with the probability distributions)

Regression vs. Correlation

- **Correlation Analysis:** the primary objective is to measure the strength or degree of linear association between two variables (both are assumed to be random)
- **Regression Analysis:** we try to estimate or predict the average value of one variable (dependent, and assumed to be stochastic) on the basis of the fixed values of other variables (independent, and non-stochastic)

Terminology and Notation

The Nature and Sources of Data for Econometric Analysis

1) Types of Data :

- Time series data;
- Cross-sectional data;
- Pooled data

2) The Sources of Data

3) The Accuracy of Data

॥ विद्यया विन्दतेऽमृतम् ॥

Summary and Conclusions

- 1) The key idea behind regression analysis is the statistic dependence of one variable on one or more other variable(s)
- 2) The objective of regression analysis is to estimate and/or predict the mean or average value of the dependent variable on basis of known (or fixed) values of explanatory variable(s)

Basic Econometrics

**TWO-VARIABLE
REGRESSION ANALYSIS:**
Some basic Ideas

2-1. A Hypothetical Example

- Total population: 60 families
- Y=Weekly family consumption expenditure
- X=Weekly disposable family income
- 60 families were divided into 10 groups of approximately the same income level (80, 100, 120, 140, 160, 180, 200, 220, 240, 260)

2-1. A Hypothetical Example

- Table 2-1 gives the conditional distribution of Y on the given values of X
- Table 2-2 gives the conditional probabilities of Y: $p(Y | X)$
- Conditional Mean
(or Expectation): $E(Y | X=X_i)$

॥ विद्यया विन्दतेऽमृतम् ॥

Table 2-2: Weekly family income X (\$), and consumption Y (\$)

X	80	100	120	140	160	180	200	220	240	260
Weekly family consumption expenditure Y (\$)	55	65	79	80	102	110	120	135	137	150
	60	70	84	93	107	115	136	137	145	152
	65	74	90	95	110	120	140	140	155	175
	70	80	94	103	116	130	144	152	165	178
	75	85	98	108	118	135	145	157	175	180
	--	88	--	113	125	140	--	160	189	185
	--	--	--	115	--	--	--	162	--	191
Total	325	462	445	707	678	750	685	1043	966	1211
Mean	65	77	89	101	113	125	137	149	161	173

2-1. A Hypothetical Example

- Figure 2-1 shows the population regression line (curve). It is the regression of Y on X
- Population regression curve is the locus of the conditional means or expectations of the dependent variable for the fixed values of the explanatory variable X (Fig.2-2)

2-1. A Hypothetical Example

- Figure 2-1 shows the population regression line (curve). It is the regression of Y on X
- Population regression curve is the locus of the conditional means or expectations of the dependent variable for the fixed values of the explanatory variable X (Fig.2-2)

2-2. The concepts of population regression function (PRF)

$$E(Y | X=X_i) = f(X_i) = \beta_1 + \beta_2 X_i$$

- β_1 and β_2 are regression coefficients, β_1 is intercept and β_2 is slope coefficient
- Linearity in the Variables
- Linearity in the Parameters

॥ विद्यया विन्दतेऽमृतम् ॥

MEANING OF DEVELOPMENT

- ▶ A branch of economics that focuses on improving the economies of developing countries. Development economics considers how to promote economic growth in such countries by improving factors like health, education, working conditions, domestic and international policies and market conditions. It examines both macroeconomic and microeconomic factors relating to the structure of a developing economy and how that economy can create effective domestic and international growth.

DIFFERENT DEVELOPMENT GOALS

- ▶ Category of Persons Development goals / Aspiration
- ▶ A. Landless Rural labourers
 - 1. More days or work
 - 2. Better wages
 - 3. Economic and social equality
- ▶ B. Rich person
 - 1) Higher family income
 - 2) Better education to their children
 - 3) To settle their children abroad

METHOD OF MEASURING NATIONAL DEVELOPMENT

- ▶ National income - it refers to the market values of all goods and services which produce in financial year within the country
- ▶ Average income / per capita income - it's the ratio of total national income of a country with respect to total population
- ▶ $PCI = \frac{\text{Total income}}{\text{Total population}}$

WORLD DEVELOPMENT REPORT

- World bank has used the criterion of per capita income for classifying into high income and low-income countries .
- Acc to the 2006 WDR:- a) \$10066 per annum and above in 2004 are called rich countries .
- b) countries with a PCI of 825 \$ or less per annum in 2004
- c) In the year 2004, India's PCI was a mere \$620 per annum

॥ विद्यया विन्दतेऽमृतम् ॥

LIMITATION OF PCI COMPARISON OF TWO COUNTRIES

country Monthly Income of citizen In 2007 (in Rupees)

	I	II	III	IV	V	PCI	
Country X	8500	9500	8800	9000	9200	9200	9000
Country Y	500	500	500	500	43000		9000

INCOME AND HUMAN DEVELOPMENT

HDR published by UNDP compares countries based on educational level of the people their health status and PCI

Human development indicators

- I. Infant mortality rate:- it indicates the number of children that die before the age of one year as a proportion of 1000 lives
- II. Literacy rate:- it measures the proportion of literate population in the 7 and above age group.
- III. Net Attendance ratio:- it is the total number of children of age group 6-10 attending school as a percentage of total number of children in the same age group.
- IV. Sex ratio:-it is the total number of female per thousand of males.

SUSTAINABLE DEVELOPMENT

Meaning -the word sustainable means something which is not short lived but can continue in future also.

Acc. to Robert Repetto," sustainable development is a development strategy that manages all natural resources and human resources as well as financial and physical assets for increasing long term wealth and well being ."

OBJECTIVE OR FEATURES OF SUSTAINABLE DEVELOPMENT

- 1.Sustained rise in the real PCI and quality of life
- 2.Reduction in pollution
- 3.Rational use of natural resources
4. To fulfils the requirements of future generations

GENETIC RECOMBINATION IN BACTERIA

- > **Genetic recombination** is the production of offspring with combinations of traits that differ from those found in either parent.
- > **Gene Transfer** refers to the movement of genetic information between organisms.
- > It can be horizontal or vertical.
- > **Vertical gene transfer** transfer of genes from parents to offspring e.g. sexual reproduction in Eukaryotes and reproduce by binary fission in Prokaryotes.
- > **Horizontal gene transfer (lateral gene transfer)** transfer of genes between two independent organisms.

Prokaryotes can also do horizontal gene transfer when they pass the gene to other prokaryotes.

TYPES OF GENETIC RECOMBINATION IN BACTERIA

- > Transformation
- > Transduction
- > Conjugation

CONJUGATION

- > Bacterial conjugation or mating is a process of genetic transfer that involves cell to cell contact.
- > It was first observed by Lederberg and Tatum (1946).

TYPES OF CONJUGATION

- 1 • $F^+ \times F^-$
- 2 • $Hfr \times F^-$
- 3 • $F' \times F^-$

- **F** - part of plasmid which are extrachromosomal DNA element that can self replicate.
- **Pili** - extension of cytoplasm which form a tube like structure
- **Donor cell** - F factor present (F^+), pili present
- **Recipient cell** - F factor absent (F^-), pili absent
- **F factor** - Fertility factor

□ $Hfr \times F^-$

- The chromosome integrated 'F' plasmid are called **Hfr (High frequency recombination)**
- It is known as **Hfr** because this bacteria have higher tendency of transferring their genetic element to the fellow bacteria

Mycorrhiza

WHAT ARE MYCORRHIZAE? The roots of many plants enter into a mutualistic symbiotic association with fungi. The existence of such a relationship was first noted in 1885 by A.B. Frank, a German botanist, who coined the term "mycorrhiza" (Gr. mykes = fungus + rhiza = root). Earlier, the mycorrhizae were believed to be infrequent and abnormal structures. But today we know that mycorrhizal associations are very common in natural and agricultural ecosystems.

TYPES OF MYCORRHIZAE

• There are Six major types of mycorrhizae, which can be categorised as under:

1. Ectomycorrhiza
2. Endomycorrhiza (includes 3 major types viz, VAM or AM, Ericoid, and orchidoid mycorrhiza)
3. Ectoendomycorrhiza (includes 2 major types viz, Arbutoid and Monotropoid mycorrhiza)

Basic Principles of Chromatography and Separation of metal ions by Ion exchange method

History and Importance

Mikhail Tswett, Russian Botanist, 1872-1919.

In 1906 Tswett used to chromatography to separate plant pigments

He called the new technique chromatography because the result of the analysis was 'written in color' along the length of the adsorbent column

Chroma means "color" and graphein means to "write"

12 Nobel prizes were awarded between 1937 and 1972 alone for work in which chromatography played a vital role

Chromatography

Is a technique used to separate and identify the components of a mixture

Chromatography is a physical method of separation in which the components to be separated are distributed between two phases one of which is stationary (**stationary phase**) while the other (the **mobile phase**) moves through it in a definite direction.

The chromatographic process occurs due to differences in the **distribution constant** of the individual sample components.

Classification of chromatography according to mobile phase:

- 1- Liquid chromatography: mobile phase is a liquid. (LLC, LSC).
- 2- Gas chromatography: mobile phase is a gas. (GSC, GLC).

Classification according to the packing of the stationary phase:

- 1- Thin layer chromatography (TLC): the stationary phase is a thin layer supported on glass, plastic or aluminium plates.
- 2- Paper chromatography (PC): the stationary phase is a thin film of liquid supported on an inert support.
- 3- Column chromatography (CC): stationary phase is packed in a glass column.

Classification according to the force of separation:

- 1- Adsorption chromatography.
- 2- Partition chromatography.
- 3- Ion exchange chromatography.
- 4- Gel filtration chromatography.
- 5- Affinity chromatography.

Ion Exchange Chromatography

Principle:

Process by which ions of an electrolyte solution are brought into contact with an ion exchange resin.

The ion exchange resin is an insoluble polymer consisting of a "matrix" (Lattice or framework) that carries fixed charges (not exchangeable) and mobile active ions "counter ions" which are loosely attached to the matrix.

In water, the counter-ions move more or less freely in the framework & can be replaced by ions of the same sign present in the surrounding solution

The "matrix" (framework) of a "cation exchanger" is considered as a crystalline non-ionized "polyanion" & the matrix of an "anion exchanger" as a non-ionized "polycation".

Polymerization

Strongly acidic cation-exchange resin

CROSSLINKING TO MAKE ION EXCHANGE RESINS

Ion Exchangers

Cation Exchangers

Active ions (counter ions) are cations.
 The **polar groups attached to the matrix are acidic** (sulphonic acids, carboxylic acids, phenols, phosphoric acids) e.g. a cation exchanger in the free carboxylic acid form:

$X-COO^- H^+$
 X = Frame work (matrix)
 -COO⁻ = Fixed charge (anionic),
 Non-exchangeable
 H⁺ = Counter ion (cation), Exchangeable

Anion Exchangers

Active ions (counter ions) are anions .
 The polar groups attached to the matrix are tertiary or quaternary ammonium groups (basic).
 e.g. Anion exchanger in the quaternary ammonium form:

$X. NR_3^+ OH^-$
 X = Framework (matrix)
 -NR₃⁺ = Fixed charge (cationic)
 Non exchangeable
 -OH⁻ = counter ion (anion), Exchangeable

Selectivity of Ion Exchange Resins

In Order of Decreasing Preference

Strong acid cation *Strong base anion*

Barium	Iodide
Lead	Nitrate
Calcium	Bisulfite
Nickel	Chloride
Cadmium	Cyanide
Copper	Bicarbonate
Zinc	Hydroxide
Magnesium	Fluoride
Potassium	Sulfate
Ammonia	
Sodium	
Hydrogen	

Which ions have greater affinity

- Higher charge, higher polarizability and decreased hydrated radius.
- $Pu^{4+} > La^{3+} > Ce^{3+} > Pr^{3+} > Eu^{3+} > Y^{3+} > Sc^{3+} > Al^{3+} > Ba^{2+} > Pb^{2+} > Sr^{2+} > Ca^{2+} > Ni^{2+} > Cd^{2+} > Cu^{2+} > Co^{2+} > Zn^{2+} > Mg^{2+} > UO^{2+} > Ti > Ag > Rb > K > NH_4^+ > Na > H > Li$
- $I^- > NO_3^- > Br^- > CN^- > HSO_3^- > Cl^- > CH_3COO^- > OH^- > F^-$

Amberlite Ion Exchange Resins - Laboratory Guide (Rohm and Hass Co., 1979)

Chelating Cation Resin

Selectivities for Metal

Metal	KM/Ca ₅
Hg ²⁺	2,800
Cu ²⁺	2,300
Pb ²⁺	1,200
Ni ²⁺	57
Zn ²⁺	17
Cd ²⁺	15
Co ²⁺	6.7
Fe ²⁺	4.7
Mn ²⁺	1.2
Ca ²⁺	1

• Selectivity coefficient for the metal over calcium ions at a pH of 4

• J.X. Khym, Analytical Ion-Exchange Procedures in Chemistry and Biology, E. Cliffs N.J. P. Hall, 1974

Advantages

- It is a non-denaturing technique. It can be used at all stages and scales of purification
- An IEX separation can be controlled by changing pH, salt concentration and/or the ion exchange media
- It can serve as a concentrating step. A large volume of dilute sample can be applied to a media, and the adsorbed protein subsequently eluted in a smaller volume
- It offers high selectivity; it can resolve molecules with small differences in charge.

Disadvantages

- costly equipment and more expensive chemicals
- turbidity should be below 10ppm.

Application of Ion Exchange Chromatography

Cation exchange Chromatography; Separation of Fe(III) and Cu(II)

- The stationary phase used is a strongly acidic cation -exchange resin
- The sodium form (Resin -SO₃⁻ Na⁺) resin is used
- Zerocarb 225 resin with 50-100 mesh
- Procedure:**
- The column is washed with 200 ml of 5 mol dm⁻³ HCl to made the resin in the H⁺ form
- The solution of CuCl₂ and FeCl₃ in a 20 ml of water is applied to the front end of the column
- Cation exchange take place and H⁺ ion liberated
- The column washed with water and remove all the liberated HCl
- The column is eluted with 15% H₃PO₄ and Fe³⁺ is collected in the eluate
- This is followed by the elution of the column with 1:1 conc. HCl:1H₂O and copper is collected in the eluate

॥ विद्यया विन्दतेऽमृतम् ॥

Light Scattering Phenomenon

- When radiation passes through a transparent medium, the species present in that medium **scatter** a fraction of the beam

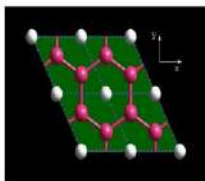

Raman Effect (or Raman Scattering)

- In 1928, the Indian physicist C. V. Raman discovered that the visible wavelength of a **small fraction** of the radiation scattered by certain molecules **differs** from that of the incident beam.
- Furthermore, he noted that the change (**shifts**) in frequency depend upon the chemical structure of the molecules responsible for the scattering

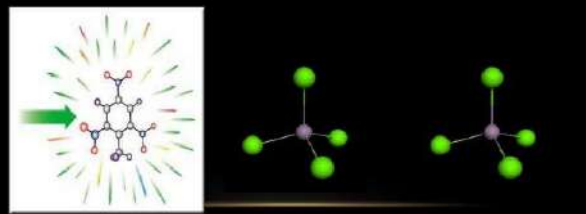

Why Raman?

- In Raman spectroscopy, by varying the frequency of the radiation, a spectrum can be produced, showing the intensity of the exiting radiation for each frequency. This spectrum will show which frequencies of radiation have been absorbed by the molecule to raise it to higher vibrational energy states.

What Exactly Is Being Measured?

When Light hits a sample, It is Excited, and is forced to vibrate and move. It is these vibrations which we are measuring.

॥ विद्यया विन्दतेऽमृतम् ॥

Stokes vs. Anti Stokes

- Atoms are at a certain energy level at any given time.
- As a laser light hits the atom, it is excited and reaches a higher level of energy, and then is brought back down.
- If an atom is at a given energy level, it can be excited then fall below the original level.
- Anti-stokes spectrum are mirror spectrums of Stokes Raman Spectrums

Rayleigh Scattering and Raman Scattering

The frequency of the scattered light can be:

- at the original frequency (ν_1) "Rayleigh scattering" very strong.

- at some shifted frequency ($\nu_3 = \nu_1 \pm \nu_{\text{molecule}}$) "Raman scattering" or Raman

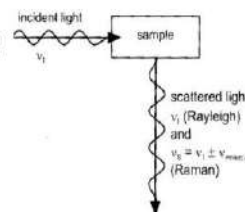

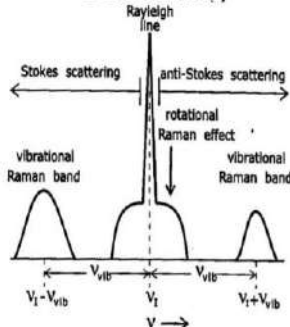

Figure 8.1: Scattering of light by a sample.

Energy Scheme for Photon Scattering

The Raman effect comprises a very small fraction, about 1 in 10^7 of the incident photons.

Raman Activity of Molecular Vibrations

Number of bands in a Raman spectrum

As for an IR spectrum, the number of bands in the Raman spectrum for an N-atom non-linear molecule is seldom $3N-6$, because:

polarizability change is zero or small for some vibrations;

bands overlap;

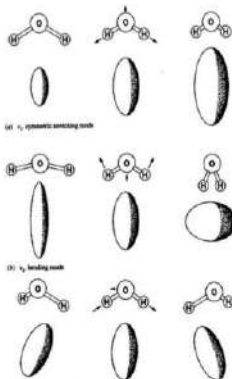

combination or overtone bands are present;

Fermi resonances occur;

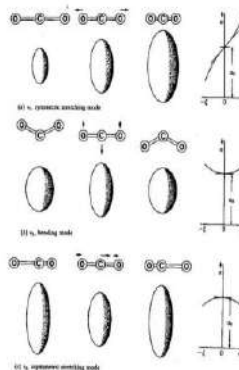

some vibrations are highly degenerate; etc...

- In order to be Raman active, a molecular rotation or vibration must cause some change in a component of the molecular polarizability. The change can either be in the **magnitude** or the **direction** of the **polarizability ellipsoid**.
- **Polarizability ellipsoid** is a three-dimensional body generated by plotting $1/\alpha$ from the center of gravity in all directions.
- This rule must be contrasted with that for IR activity that requires change in the net dipole moment of the molecule.

Raman and Infrared are Complementary Techniques

- Interestingly, although they are based on two distinct phenomena, the Raman scattering spectrum and infrared absorption spectrum for a given species often resemble one another quite closely in terms of observed frequencies.

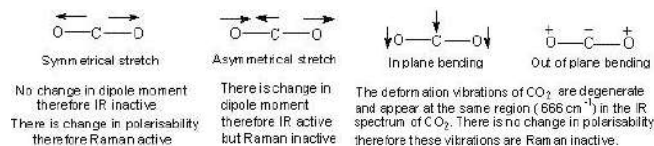

Rule of Mutual exclusion

In a molecule with a centre of symmetry it is seen that vibrations that are Raman active are IR inactive and vice-versa, this is called the Principle of mutual exclusion (eg, as in CO₂ see details in the end). In molecules with different elements of symmetry, certain bands may be active in IR, Raman, both or neither. For a complex molecule that has no symmetry except identity element, all of the normal modes are active in both IR and Raman. This does not; however mean that they can be observed. In both types the neighbouring strong bands may obscure weak bands, while others may be intrinsically too weak to be observed even if they are theoretically "allowed".

Table 4.1 Raman and infra-red activities of carbon dioxide

Mode of vibration of CO ₂	Raman	Infra-red
ν_1 : symmetric stretch	Active	Inactive
ν_2 : bend	Inactive	Active
ν_3 : asymmetric stretch	Inactive	Active

॥ विद्यया विन्दतेऽमृतम् ॥

Uses of Raman Spectroscopy

Raman spectroscopy has become more widely used since the advent of FT-Raman systems and remote optical fibre sampling. Previous difficulties with laser safety, stability and precision have largely been overcome.

Basically, Raman spectroscopy is complementary to IR spectroscopy, but the sampling is more convenient, since glass containers may be used and solids do not have to be milled or pressed into discs.

Applications of Raman spectroscopy

Qualitative tool for identifying molecules from their vibrations, especially in conjunction with infrared spectrometry.

Quantitative Raman measurements

a) not sensitive since Raman scattering is weak. But resonance Raman spectra offer higher sensitivity, e.g. fabric dyes studied at 30-50 ppb.

b) beset by difficulties in measuring relative intensities of bands from different samples, due to sample alignment, collection efficiency, laser power.

Overcome by using internal standard.

Differences between IR and Raman methods

Raman	IR
1. It is due to the scattering of light by the vibrating molecules.	It is the result of absorption of light by vibrating molecules.
2. The vibration is Raman active if it causes a change in polarisability.	Vibration is IR active if there is change in dipole moment.
3. The molecule need not possess a permanent dipole moment.	The vibration concerned should have a change in dipole moment due to that vibration.
4. Water can be used as a solvent.	Water cannot be used due to its intense absorption of IR.
5. Sample preparation is not very elaborate; it can be in any state.	Sample preparation is elaborate Gaseous samples can rarely be used.
6. Gives an indication of covalent character in the molecule.	Gives an indication of ionic character in the molecule.
7. Cost of instrumentation is very high.	Comparatively inexpensive.

Department of Electronics

ASK, FSK and PSK Modulators and Demodulators

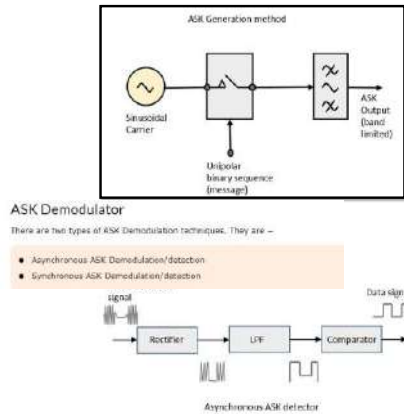

Amplitude Shift Keying ASK is a type of Amplitude Modulation which represents the binary data in the form of variations in the amplitude of a signal.

Any modulated signal has a high frequency carrier. The binary signal when ASK modulated, gives a **zero** value for **Low** input while it gives the **carrier output** for **High** input.

The following figure represents ASK modulated waveform along with its input.

The figure shows two waveforms. The top waveform is the 'Input binary sequence' with a vertical axis from 0v to 1v. The bottom waveform is the 'ASK Modulated output wave' with a vertical axis from -1v to 1v. The output wave consists of high-frequency pulses corresponding to the '1's in the binary sequence and zero amplitude for the '0's.

ASK: Advantage, Disadvantage, Application

Advantage:
Simplicity.

Disadvantages:
ASK is very susceptible to noise interference; noise usually affects the amplitude, therefore ASK is the modulation technique most affected by noise.

Application:
ASK is used to transmit digital data over optical fiber.

॥ विद्यया विन्दतेऽमृतम् ॥

Theory: FSK Modulation and Demodulation

$s(t) = A\cos(2\pi f_1 t)$, binary 1
 $S(t) = A\cos(2\pi f_2 t)$, binary 2

Here, in FSK, the "1" is called the mark frequency and the "0" is called the space frequency.

FSK Modulation

Block Diagram of FSK Modulator

FSK: Advantage, Disadvantage & Application

Advantages:

- It has lower probability of Error (P_e).
- It provides high SNR.
- It has higher immunity to noise due to constant envelope. Hence it is robust against variation in attenuation through channel.
- FSK transmitter and FSK receiver implementations are simple for low data rate application.

Disadvantages:

- It uses larger bandwidth compare to other modulation techniques such as ASK and PSK. Hence, it is not bandwidth efficient.

Application:

Amateur Radio, Early Telephone-line modems, Emergency broadcast system

What is Phase Shift Keying?

Phase Shift Keying is a type of digital modulation technique where we transmit the data by modulating the phase of the carrier signal. The modulation is carried out by changing the inputs at regular intervals of time. Here we use finite phases and each of these phases can be represented by a unique pattern of bits.

BPSK Modulator

PSK: Advantage, Disadvantage & Application

Advantages:

- It allows data to be carried along a radio communications signal much more efficiently than with FSK.
- In QPSK 4-phase states are used, all within 90 degree of one another.

Disadvantages:

- It is non-coherent reference signal.
- It produces more incorrect demodulations because the error can integrate with time since the reference signal for demodulation is not fixed.

Application:

- Optical communication
- Local Oscillator
- Multi-channel WDM

Department of Physiology

What is blood pressure (BP) ?

The arterial BP, a measure of lateral force per unit area of vascular wall, is expressed as millimeters of mercury (mmHg).

It is expressed in terms of Systolic Pressure (SBP) and Diastolic Pressure (DBP).

॥ विद्यया विन्दतेऽमृतम् ॥

Measurement of blood pressure:

- 1. Direct methods
- 2. Indirect methods
 - a. Palpatory method
 - b. Auscultatory method
 - c. Oscillatory method

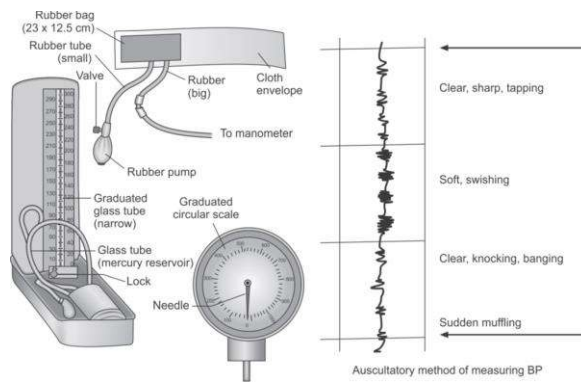

Palpatory method

- The cuff is tied around the upper arm with the lower border of the cuff not less than 2.5 cm above the cubital fossa.
- The outlet valve of the bulb is closed.
- The radial pulse is palpated while the cuff is being inflated to a pressure slightly above the level at which the radial pulsation is no longer felt.
- The outlet valve is opened. The manometric reading is noted at the point where the pulsation reappears.
- The average of the two readings gives the systolic pressure.
- The diastolic pressure cannot be determined by this method.

Auscultatory method

- Both the systolic and diastolic blood pressure can be measured.
- The stethoscope is placed over the brachial artery and pressure in the cuff is raised above the systolic pressure
- The pressure is then lowered gradually (2–3 mm per second). The sounds that are heard are the Korotkoff's sounds.
- The first sound (phase one) that occurs is a sharp tapping sound, indicates the peak systolic pressure, the second and third phases, initially murmurish in quality and then louder and more banging, are due to turbulent flow of blood through a partially occluded vessel.
- In the fourth phase, the sound becomes muffled and dull and the fifth phase accurately gives true diastolic pressure, which is disappearance of the sound (Figure 1).

॥ विद्यया विन्दतेऽमृतम् ॥

Oscillatory method

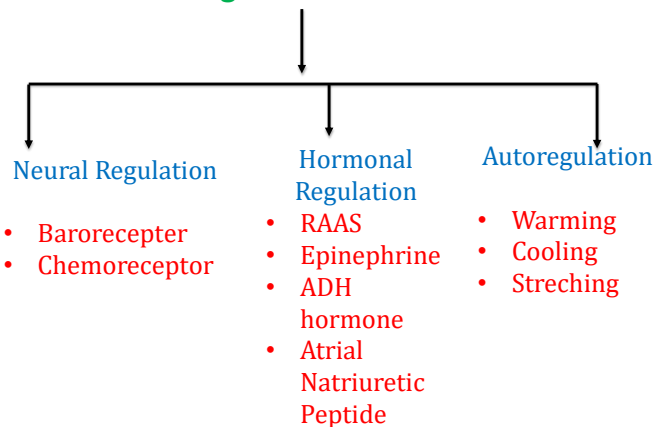

- This is another method of determining blood pressure. By this method, both the systolic and diastolic blood pressure are determined.
- The pressure at which oscillations appear in the mercury manometer gives the systolic pressure and the pressure at which it disappears give the diastolic blood pressure. However, this method is not accurate.

Baroreceptor Reflex

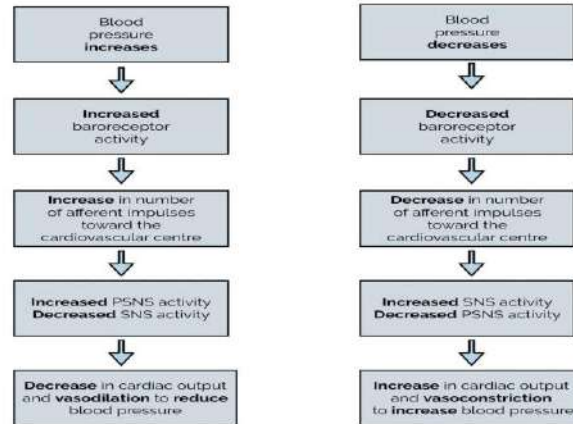

Changes in MAP are detected by **baroreceptors** (pressure receptors) in the carotid and aortic arteries.

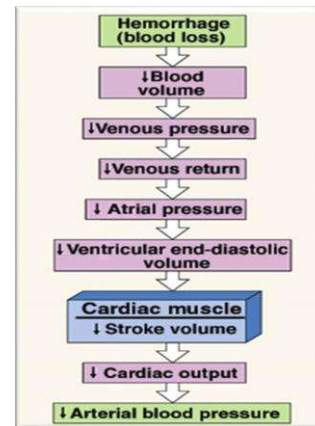

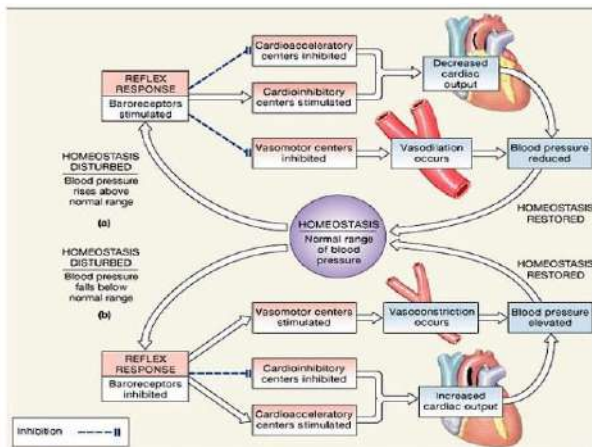

Carotid baroreceptors are located in the carotid sinus, both sides of the neck. Aortic baroreceptors are located in the aortic arch.

These receptors provide information to the cardiovascular centres in the medulla oblongata about the degree of stretch with pressure changes.

2. THE CHEMORECEPTOR REFLEX

- ❑ Chemoreceptors sense the changes in blood level of O_2 , CO_2 , and H^+ concentration
- ❑ Reduced blood flow (due to reduced MAP) stimulates the chemoreceptors through oxygen lack, increased hydrogen ions or carbon dioxide.
- ❑ Chemoreceptors are stimulated when the MAP is lower than 60 mmHg.
- ❑ Response is excitatory, NOT inhibitory; mainly through activation of sympathetic nervous system.
- ❑ They reduce blood flow to unessential areas and protect vital tissues like brain and heart.

Autoregulation Of BP

Atrial Natriuretic Peptide mechanism (ADH)

- Warming: Causes Vasodilation
- Cooling: Causes Vasoconstriction
- Stretching:
 - More stretching: SM in arterial wall contracts more forcefully.
 - Less stretching: SM in arterial wall relaxes.

Stretch Relaxation of Vessels

Blood vessel smooth muscle respond to changes in blood volume.

When pressure in blood vessels is “too high”, vessels stretched and stretching more and more for minutes or hours; resulting in decrease blood pressure in vessels toward normal.

The continuing stretch response of the vessels can serve as an intermediate -term pressure “buffer.”

Exercise

- Exercise consists of activities that are planned and structured, and that maintain or improve one or more of the components of physical fitness.
- Physical activity suggests a wide variety of activities that promote health and well-being.
- Exercise is often associated with fitness maintenance or improvement only.

THE TYPES OF EXERCISES:

▶ AEROBIC EXERCISES

▶ ISO-KINETIC EXERCISES

AEROBIC EXERCISES:

- ▶ IT IS THE SUSTAINED EXERCISES WHICH STIMULATES AND STRENGTHENS THE HEART AND LUNGS, WHILE IMPROVING THE BODY'S UTILISATION OXYGEN.
- ▶ HIGH INTENSITY (REQUIRES ENERGY)
- ▶ LONG DURATION
- ▶ REQUIRES HIGH ENDURANCE (STAMINA)
- ▶ EXAMPLES: JOGGING, BICYCLING, ROPE JUMPING AND SWIMMING.

ISO-KINETIC EXERCISE

- ▶ IT IS THE SUSTAINED EXERCISES WHICH STIMULATES AND STRENGTHENS SPECIFIC PARTS OF THE BODY BUT HAVE LESS EFFECT ON OVERALL FITNESS.
- ▶ HIGH INTENSITY
- ▶ SHORT DURATION
- ▶ REQUIRES LOW ENDURANCE (STAMINA)
- ▶ EXAMPLES: SPRINTING AND WEIGHT-LIFTING

STAGES (SEVERITY) OF EXERCISE

According to physiology, there are 3 types of exercises :-

- Mild: minimum or no cardiovascular change.
Ex: Walking
- Moderate: No exertion but some cardiovascular changes can be seen
Ex: Jogging
- Severe: Complete exertion
Ex: Swimming

RULES OF EXERCISE

- Empty stomach i.e., 3 to 4 hours after food
- Bowel and bladder should be evacuated
- Adequate rest in between and after is must
- Bath after exercise is compulsory
- Water should not be taken in between exercises
- Food should not be taken during exercise
- Very vigorous exercise should be avoided
- Proper timing should be followed
- Regularity of exercise gives better results

PRECAUTIONS FOR EXERCISE

- Wrong practice and procedure
 - For Ex: Weight training exercises should be done carefully and slowly
- Muscles should not be worked to fatigue
- Irregularity and discontinuation of exercises leads to problems
- Not following the rules of exercise properly leads to disadvantages
- But when exercise are practiced properly and systematically and correctly, no exercise is harmful or disadvantageous

PURPOSE OF EXERCISE

- Exercise keeps a person physically, mentally, emotionally and spiritually healthy
- Indirectly aim of exercise is towards the positive health
- It is the set of systematic movement of the body which helps in growth of the individual
- It gives happiness and helps in developing the mind and mind becomes fresh
- To improve the stamina and strength

EFFECT ON THE HEART

- Oxygen rich blood is pumped out of the heart to the muscles and organs via artery's (red areas)
- De-oxygenated blood is returned to the heart via veins (blue areas)
- Artery's have plenty of pressure on them from the heart contracting to force the blood away from the heart
- Veins however are not under any pressure. To stop the blood going backwards veins have valves

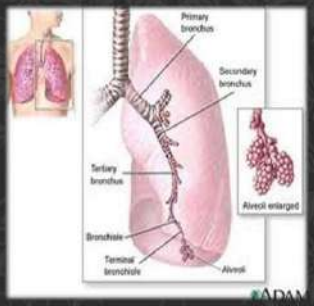

CARDIAC OUTPUT

- 5-6 liters of blood is pumped out of heart/min.
- In moderate-20liters/min.
- Severe exercise- 35 liters/min
- Cardiac output is directly proportional to oxygen consumption
- This is due to increased heart rate and increased stroke volume
- (70ml/contraction)
- $CO = HR \times SV$

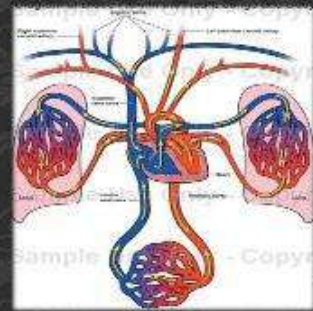

EFFECTS ON THE LUNGS

- During exercise there is increase in CO₂ of blood
- Chemoreceptor in medulla are stimulated
- Stimulation of dorsal respiratory group of neurons
- Increase the rate of respiration
- Removal of CO₂ is increased

LINKING TOGETHER..

- The heart and lungs are connected to supply the body with oxygen rich blood and work together to take away and get rid of carbon dioxide
- This happens at the capillary networks that cover the alveoli and muscle cells

CHANGES IN THE BLOOD

- Mild hypoxia: which increases CO₂ concentration will lead to pH decrease
- It stimulates the juxtaglomerular cells to synthesize erythropoietin
- So that there is a production of RBCs
- There is increased heat production during exercise which increases the body temperature

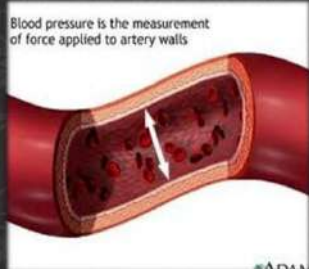

CHANGES IN THE BLOOD

Cont...

- To compensate the body temperature sweating and fluid loss occurs resulting into decreased blood volume which is also due to vasodilatation in skin
- Decreased blood volume results in Hemoconcentration i.e. water is lost through plasma
- That's why severe exercise can even cause dehydration

BLOOD PRESSURE

- Systolic = the pressure exerted on the walls of the arteries when the heart contracts
- Diastolic = the pressure on the walls of the arteries as the heart relaxes (fills)
- Normal BP tends to be around:
 - 120/80 mmHg

EFFECT ON MUSCLES

- Venous return increased - Due to the muscle pump and Respiratory pump
- Vasodilatation leads to relaxation of the muscles
- In the muscles end product of metabolism is lactic acid which is further non-degradable is also a stimulant for vasodilatation

EFFECTS ON ELIMINATION

- Skin - Sweating is improved
- Kidney - Urine output is increased
- Lungs – Carbon dioxide and other unwanted gases removed
- GIT- Excretion of feces is increased due to proper assimilation and proper digestion

Fitness

- Participating in physical activity is beneficial to people of all ages. Physical activity contributes to fitness, a state in which people's health characteristics and behaviors enhance the quality of their lives.

Types of Fitness

<p>Physical fitness</p> <p>◆ A set of physical attributes related to a person's ability to perform physical activity successfully, without undue strain, and with a margin of safety.</p>	<p>Health-related physical fitness</p> <p>◆ A physiological state of well-being that reduces the risk of hypokinetic disease; a basis for participation in sports; and a vigor for the tasks of daily living. Components include cardio-respiratory endurance, muscle strength, flexibility, and body composition.</p>	<p>Skill-related physical fitness</p> <p>◆ Common components of physical fitness (e.g., agility, balance, coordination, speed, power, reaction time) that enable participation in sports and other physical activities; also called performance or motor fitness.</p>
--	---	--

Physical Fitness

- ✳ Physical fitness refers to one's overall measure of physical, bodily health; it is typically made up of
 - ◆ Cardiovascular endurance
 - ◆ Body composition
 - ◆ Overall muscular strength
 - ◆ Stamina

Department of Physics

Spectroscope

- Light from the telescope (pointing towards the star) is passed through a slit, a collimating lens, through the prism of the spectroscope to obtain the spectrum.
- The resulting spectrum is focused by another lens and can either be viewed directly or photographed.

Stellar atmosphere

- The spectral energy distribution of starlight is determined in a star's atmosphere, the region from which radiation can freely escape.
- The stellar photosphere, a thin, gaseous layer, shields the stellar interior from view. The photosphere is thin relative to the stellar radius, and so we regard it as a uniform shell of gas.
- The physical properties of this shell may be approximately specified by the average values of its pressure P , temperature T , and chemical composition μ (chemical abundances).

Stellar spectra

- All stars look alike. But, if observed carefully, some stars appear bright and some faint.
- It is usually difficult to make out the colours of stars if they are fainter than the second magnitude. This is due to poor colour sensitivity of the human eye to fainter light.
- Stellar spectra, however, show that individual stars differ widely from one another in brightness and spectral details. While spectra of some stars contain lines due to gases like hydrogen and helium, others show lines produced by metals.
- Some stars have spectra dominated by broad bands of molecules such as titanium oxide.
- The important lines in stellar spectra are due to hydrogen, helium, carbon, oxygen, neutral and ionized metal atoms.
- Bands in the spectra are caused by the molecules such as titanium oxide, zirconium oxide, CH, CN, C₃ and SiS₂.

Harvard classification

- A spectral taxonomy developed at Harvard by Edward C. Pickering (1846 – 1919) in the 1890s labeled spectra with capital letters according to the strength of their hydrogen absorption lines.
- Then, in 1901, Annie Jump Cannon (1863–1941) used the scheme of Pickering and rearranged the sequence of spectra.
- She classified more than 2,50,000 stars by observing the strength of absorption lines, particularly, the hydrogen Balmer lines.
- In this way stars have been classified into seven major spectral types, namely, O, B, A, F, G, K and M.
- For greater precision, astronomers have divided each of the main spectral types into 10 sub-spectral types. For example, spectral type A consists of sub-spectral types A0, A1, A2... A8, A9. Next come F0, F1, and so on. Thus there are 70 sub-spectral types possible. However, in practice, all 70 types have not been observed. The advantage of the finer division is to estimate the star's temperature to accuracy within about 5 percent.
- The Sun, for example, is not just a G star, but a G2 star, with a surface temperature of about 5800 K

॥ विद्यया विन्दतेऽमृतम् ॥

Principle of Harvard Scheme

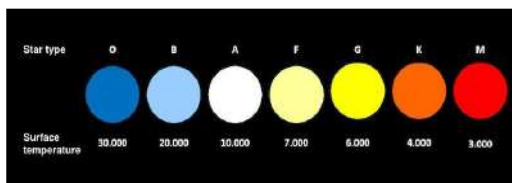

- Harvard scheme was based upon the strengths of the hydrogen Balmer absorption lines in stellar spectra, and the spectral ordering was alphabetical (A through P).
- The A stars had the strongest Balmer lines, and the P stars had the weakest.
- Some letters were eventually dropped, and the ordering was rearranged to correspond to a sequence of decreasing temperatures : OBAFGKM.
- In general, this classification scheme relies on three basic criteria to subdivide the stellar spectra: --
- (1) the absence of lines,
- (2) the strengths (equivalent widths) of lines,
- (3) the ratios of line strengths (such as Ca II K-lines compared to those of the Balmer series).

Annie Jump Cannon

O, B, A, F, G, K and M.

- Oh Be A Fine Girl/Guy Kiss Me

Spectral Type	Color	Temperature (K)*	Spectral Features
O		28,000-50,000	Ionized helium, especially helium
B		10,000-28,000	Helium, some hydrogen
A		7,500-10,000	Strong hydrogen, some ionized metals**
F		6,000-7,500	Hydrogen and ionized metals such as calcium and iron
G		5,000-6,000	Both metals and ionized metals, especially ionized calcium
K		3,500-5,000	Metals
M		2,500-3,500	Strong titanium oxide and some calcium

* To convert approximately to Fahrenheit, multiply by 9/5.
** Astronomers regard elements heavier than helium as metals.

Spectra of O, B, A, F, G, K and M.

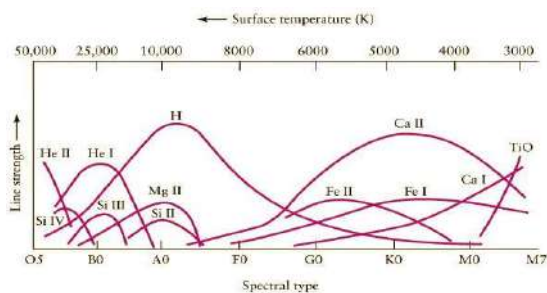

Balmer line absent in Cool star

- You know that 50 to 80 percent of the mass of a typical star is made of hydrogen.
- However, only a small fraction of the stars show Balmer lines in their spectra!
- It is so because most of the stars do not have sufficient surface temperature to raise the electrons in hydrogen atoms to the second and higher energy levels.
- And, as you know, for production of Balmer lines, electrons in the hydrogen atoms make transitions from the higher energy levels to the first excited energy level.
- For example, a M type star whose surface temperature is about 3000 K, does not have enough energy for production of Balmer lines. Therefore, even though there is an abundance of hydrogen in the stars, Balmer lines may not be observed in the spectra of all of them; the surface temperature prohibits the formation of Balmer lines of hydrogen.

Balmer line absent in Excessively Hot star

- Very hot stars with surface temperatures higher than 25000 K also do not contain Balmer lines in their spectra
- Such stars are so hot that the electrons of the hydrogen atoms are ripped off and the atoms are ionised. Such ionised atoms cannot produce spectral lines.
- *It is only when the surface temperature of a star is between 7500 K and 10000 K that the conditions are favorable for the production of Balmer lines.*
- *Therefore, surface temperature of a star determines which spectral lines would be formed and what their intensities would be.*

Dependence of spectral line strengths on temperature

Hertzprung- Russell (H-R) diagram

O B A F - class

- O** - Blue stars, surface temperature 20,000–35,000 K. Spectrum with lines from multiply ionized atoms, e. g. He II, CIII, NIII, OIII, SiV. He I visible, H I lines weak.
- B** - Blue-white stars, surface temperature about 15,000 K. He II lines have disappeared, He I (403 nm) lines are strongest at B2, then get weaker and have disappeared at type B9. The K line of Ca II becomes visible at type B3, H I lines getting stronger. OII, Si II and MgII lines visible.
- A** - White stars, surface temperature about 9,000 K. The H I lines are very strong at A0 and dominate the whole spectrum, then get weaker. H and K lines of Ca II getting stronger. He I no longer visible. Neutral metal lines begin to appear.
- F** - Yellow-white stars, surface temperature about 7,000 K. H I lines getting weaker, H and K of Ca II getting stronger. Many other metal lines, e. g. Fe I, Fe II, Cr II, Ti II, clear and getting stronger.

G K M class

- G** - Yellow stars like the Sun, surface temperature about 5,500 K. The H I lines still getting weaker, H and K lines very strong, strongest at G0. Metal lines getting stronger. G band clearly visible. CN lines seen in giant stars.
- K** - Orange-yellow stars, surface temperature about 4,000 K. Spectrum dominated by metal lines. H I lines insignificant. Ca I 422.7 nm clearly visible. Strong H and K lines and G band. TiO bands become visible at K5.
- M** - Red stars, surface temperature about 3,000 K. TiO bands getting stronger. Ca I 422.7 nm very strong. Many neutral metal lines.

Spectral Classes

Spectral Classes

Star Type	Color	Approximate Surface Temperature	Average Mass (The Sun = 1)	Average Radius (The Sun = 1)	Average Luminosity (The Sun = 1)	Main Characteristics	Examples
O	Blue	over 25,000 K	60	15	1,400,000	Singly ionized helium lines (He I) either in emission or absorption. Strong UV continuum.	10 Lacerta
B	Blue	11,000 - 25,000 K	18	7	20,000	Neutral helium lines (He II) in absorption.	Rigel, Spica
A	Blue	7,500 - 11,000 K	3.2	2.5	80	Hydrogen (H) lines strongest for A0 stars, decreasing for other A's.	Sirius, Vega
F	Blue to White	6,000 - 7,500 K	1.7	1.3	6	Ca II absorption. Metallic lines become noticeable.	Canopus, Procyon
G	White to Yellow	5,000 - 6,000 K	1.1	1.1	1.2	Absorption lines of neutral metallic atoms and ions (e.g. once-ionized calcium).	Sun, Capella
K	Orange to Red	3,500 - 5,000 K	0.8	0.9	0.4	Metallic lines, some blue continuum.	Arcturus, Aldebaran
M	Red	under 3,500 K	0.3	0.4	0.04 (very faint)	Some molecular bands of titanium oxide.	Betelgeuse, Antares

H-R Diagram

- One of the most useful and powerful plots in astrophysics is the Hertzsprung-Russell diagram.
- It is a scatter plot of stars showing the relationship between the stars' absolute magnitudes or luminosities versus their stellar classifications or effective temperatures.
- The diagram was created independently in around 1910 by Ejnar Hertzsprung and Henry Norris Russell, and represented a major step towards an understanding of stellar evolution.
- In this diagram, a star located near the bottom of the diagram means that its luminosity is low and similarly, a star in the right indicates that its temperature is low.
- stars of greater luminosity are toward the top of the diagram, and stars with higher surface temperature are toward the left side of the diagram

Bolometric Correction (B.C.)

- The luminosity (L) of a star is defined as the total energy radiated by it, in one second, consisting of radiations of all wavelengths.
- Absolute visual magnitude refers only to the visible range of the electromagnetic radiation.
- Therefore, corrections need to be applied for the radiations emitted at other wavelengths.
- The required extent of correction depends upon the temperature of the star. This correction is called **Bolometric Correction (B.C.)**

$$M_{BC} = M + BC$$

$$m_{BC} = m + BC$$

Absolute magnitudes(M) and Luminosities(L)

- M - Absolute magnitudes
- m - Apparent magnitudes
- L - Luminosities

$$M_1 - M_2 = -2.5 \log \left(\frac{L_2}{L_1} \right)$$

Luminosity (L) and Radius (R) of a Star

- Energy radiant flux, $F = \sigma T^4$
- Again, Luminosity, $F = \frac{L}{4\pi R^2}$
 $L = 4\pi\sigma R^2 T^4$
- H-R diagram separates the effects of temperature and surface area on the luminosity L of the stars because the brightness of two stars at the same temperature T is proportional to their radii R.
- This feature allows us to classify stars in terms of their radius R.

H-R Diagram

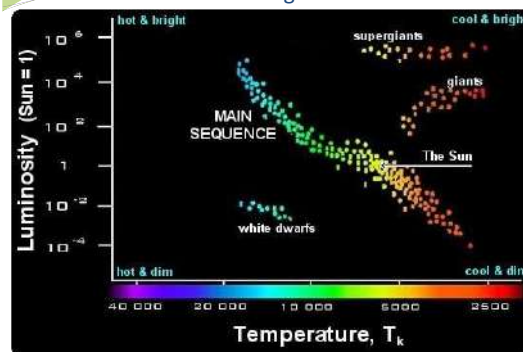

Star classification and H-R diagram

- The stars have been divided into different types/groups on the basis of their location on the H-R diagram.
- The distribution of stars follows a pattern such that a majority of stars fall along a central diagonal called the **main sequence**. The main sequence stars account for nearly 90 per cent of all stars.
- The other types of stars such as **giants**, **super giants**, **white dwarfs** populate other regions.

Giants, Super giants & White dwarfs

- The **giant stars** (named so because of their big size) located at the top right of the H-R diagram have low temperature but high luminosity.
- When we move further up in the H-R diagram, we find **super giants**. These high luminosity and low temperature stars must be extraordinarily big in size. It has been estimated that the diameters of super giants are roughly 100 to 1000 times the diameter of the Sun.
- Further, when we come to the bottom left (below the main sequence), we come across stars known as **white dwarfs** stars which are very hot but their luminosity is very low.
- **White dwarf** stars must be very small in size compared to the Sun to have such low luminosities.

Morgan-Keenan Luminosity Classes Yerkes Luminosity Classes

- Luminosity is the total brightness of a star. Luminosity is the total amount of energy that a star radiates each second (including all wavelengths of electromagnetic radiation).
- In the Yerkes classification scheme, stars are assigned to groups according to the width of their spectral lines. For a group of stars with the same temperature, the luminosity class differentiates between their sizes.
- Luminosity of a star predominantly depends on its size: the bigger the star is, the higher is the value of its luminosity.
- The spectrum of an isolated atom differs from that of the gas of such atoms. The difference is manifested in the form of broadening of spectral lines of the atom in the latter case due to collision between atoms.

Luminosity Classes

- For frequent collisions, a denser gas provides a better environment than a rarer gas. Therefore, if the spectral lines in stellar spectra are broadened, we can safely conclude that the density of the star is high.
- Examples of such stars are the main sequence stars. On the other hand, giant stars have very low densities. As a result, their spectral lines are fairly narrow compared to the main sequence stars.
- Thus, sharp lines in the stellar spectra clearly indicate that the size of the star is large and hence its luminosity is high. The converse is also true. Thus, looking at the width of spectral (absorption) lines, we can obtain a fairly good idea about its luminosity.
- As such, stars have more or less continuous range of luminosities. Still, on the basis of the width of their spectral lines, they are categorized into various **luminosity classes**.

Luminosity Classes

Class	Description	Relative Brightness	Examples
Ia	Most Luminous Supergiants	10000 × Sun	Rigel (B1)
Ib	Luminous Supergiants	1000 × Sun	Betelgeuse (M2); Antares (M1)
II	Bright Giants	100 × Sun	Adara (B2); Saiph (F1)
III	Normal Giants	10 × Sun	Arcturus (K2); Aldebaran (K5)
IV	Subgiants	1 × Sun	Arcturus (K0.5)
V	Dwarfs	1 × Sun	Yas (A2); Alpha Cent (B2)

The Sun is classified as a G2 V star

Department of Geography

Determining "RISK"

- To determine risk, one should consider three components and will have to be quantified separately. These three components are-
 - Hazard Occurrence Probability:** Likelihood of experiencing hazard or disaster at a location of a region.
 - Elements at Risk:** Buildings, infrastructure, people and other elements which would be affected most by the hazard of disaster if occurred.
 - Vulnerability of Elements at Risk:** To what extent or to what magnitude elements will be damaged or affected if disaster or hazard happens.

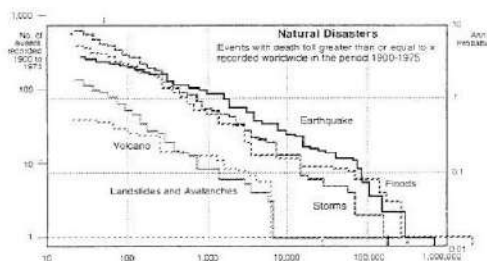

Cont...

- For example, A wind storm is occurring somewhere. The intensity of that could be varying. A strong wind storm is rarer than a normal one, a very strong or a gale will be more rare than strong one. Here elements at risk ranges a lot, peoples' lives, livestock, housing, crop, economy, jobs, equipments. Vulnerability will be proportionate to the intensity here. More severe the storm will be, there will be more damage. Each elements will be affected differently thus, it will be multi-dimensional impact.
- Relationship between severity of hazard and degree of damage is Vulnerability Relationship.

Presentation of Risk

- Risk or specific risk is defined as "average rate of lost" or "Attrition Rate". But this can give an exaggerated picture of loss than reality. It can not be denied after all that most of the phenomenal damage or destruction occurs due to exceptional natural events rather than regular continuous decadent processes.
- With the help of **f:N Curve**, frequency and number of occurrences of natural hazards and disasters along with casualties can be shown integrally. However this map represents phenomena over a large region for longer period. To get short term analysis over smaller regions "Risk Mapping" is needed instead of **f:N Curve**.

f:N CURVES FOR VARIOUS DISASTER TYPES

॥ विद्यया विन्दतेऽमृतम् ॥

Cont...

Risk Mapping

- It includes spatial or geographical distribution of expected losses from one or more natural disasters. Risk mapping includes three parts-
 - Scenario Mapping: Are mainly done to estimate probable requirement of resources to aid an emergency situation. Here number of casualties, injuries and other losses are considered. From these it is easy to estimate that how much resources will be required for medical attention, accommodate homeless, reduce disruption and minimize recovery period.
 - Potential Loss Studies: Here mapping the effect of expected hazard occurrence probability across a region.

- Annualized Risk Mapping: To analyze levels of losses from all levels of hazards over a period of time. The map indicates expected losses over both time and space.

➤ Hazard Evaluation:

- To calculate risk, we need to understand the probability of occurrences of certain hazards with their intensity and frequency within a given period of time in a particular region. Severity of different type of hazards are quantified in different ways and these are mostly done based on event and site parameters. Some of common hazards are there whose severity are quantified like follows: (next slide)

Cont...

Flood	Disaster	Area Flooded (sq.km) & Vol of water (cu.m)	Depth of floodwater
Earthquake	Hazard / Disaster	Energy Release (mag)	Intensity of shaking (richter)
Volcano	Hazard / Disaster	Eruption size and duration	Ash coverage, lava dust fallout, debris
Strong Winds	Hazard / Disaster	Wind velocity (km/h) & area	Wind speed velocity
Landslide	Hazard / Disaster	Volume of material dislodged	Potential of ground failure
Tsunami	Disaster	Height of wave crest	Depth of flood water
Draught	Disaster	Area affected	Rainfall deficit

Cont...

- Natural hazards are extreme cases of normal events. A hurricane is an extreme wind, a destructive earthquake is a large version of the energy released by geological processes that are occurring everyday; a flood is the result of extreme precipitation or storm, or tidal conditions. Extreme meteorological, hydrological or geophysical events pose threats to the human made environment and to individuals.
- Extreme occurrences of natural hazards are difficult to predict as they occur irregularly and all of a sudden. They initially can not be differentiated from normal events but once understood that they are not normal, they are more fatal, it becomes too late for response.

Mobile: +918101078393

॥ विद्यया विन्दतेऽमृतम् ॥

Cont...

- Research studies have examined how likely extreme cases of natural phenomena are to occur. It has been found that the number of large events of a flood or an earthquake or extreme cases of other natural hazards has some relation to the number of smaller events that occur. Thus the number of small events, occur more frequently can be used to predict the likelihood of the more severe ones.
- **Flood hazard** is often mapped so that the maximum extent of floods with different return periods are superimposed on each other.
- **Volcanic hazards** are less easily quantified, but areas at greatest risk can easily be identified.

Cont...

- It is important for development planners to make some effort to quantify the tangible aspects of vulnerability and loss to assist mitigation and preparedness planning.
- But, the 'intangible' aspects of vulnerability will often be as important as the quantifiable aspects and must not be neglected.

Vulnerability Evaluation

- Vulnerability is the propensity of things to be damaged by a hazard. People's lives and health are at risk directly from the destructive effects of the hazard. Their incomes and livelihood are at risk because of the destruction of the buildings, crops, livestock or equipment which these depend on. Each type of hazard puts a somewhat different set of elements at risk. Most of disaster mitigation work is focused on reducing vulnerability, and in order to act to reduce vulnerability, development planners need an understanding of which elements are most at risk from the principal hazards which have been identified.

	Principal vulnerable elements	
	Tangibles	Intangibles
Floods	Everything located in flood plains or tsunami areas. Crops, livestock, machinery, equipment, infrastructure. Weak buildings.	Social cohesion, community structures, cohesion, cultural artifacts
Earthquakes	Weak buildings and their occupants. Machinery and equipment, infrastructure. Livestock. Contents of weak buildings.	Social cohesion, community structures, cohesion, cultural artifacts
Volcanic eruption	Anything close to volcano. Crops, livestock, people, combustible roofs, water supply.	Social cohesion, community structures, cohesion, cultural artifacts
Land instability	Anything located on or at base of steep slopes or cliff tops, roads and infrastructure, buildings on shallow foundations.	Social cohesion, community structures, cohesion, cultural artifacts

॥ विद्यया विन्दतेऽमृतम् ॥

Land instability	Anything located on or at base of steep slopes or cliff tops, roads and infrastructure, buildings on shallow foundations.	Social cohesion, community structures, cohesion, cultural artifacts
Strong winds	Lightweight buildings and roofs, fences, trees, signs; boats fishing and coastal industries	Social cohesion, community structures, cohesion, cultural artifacts
Drought/ desertification	Crops and livestock, Agricultural livelihoods, Peoples' health	Disruption of populations, Destruction of the environment, Cultural losses
Technological disasters	Lives and health of those involved or in the vicinity, Buildings, equipment, infrastructure, crops and livestock	Destruction of the environment, Cultural losses, Possible population disruption.

Quantifying Vulnerability

- **Vulnerability** is defined as the degree of loss to a given element at risk resulting from a given hazard at a given severity level.
- The vulnerability of an element is usually expressed as a percentage loss (or as a **value between 0 to 1**) for a given hazard severity level.
- In a large number of elements, like building stock, it may be defined in terms of the proportion of buildings experiencing some particular level of damage.
- As the severity of the hazard increases, the level of damage that the element is likely to suffer will increase.
- For a full definition of vulnerability, the expected damage level at every level of severity of hazard would need to be defined.

Cont...

What is Global Energy Crisis?

- The energy crisis is the concern that the world's demands on the limited natural resources that are used to power industrial society are diminishing as the demand rises.
- These natural resources are in limited supply. While they do occur naturally, it can take hundreds of thousands of years to replenish the stores.
- The energy crisis is a broad and complex topic. Most people don't feel connected to its reality unless the price of gas at the pump goes up or there are lines at the gas station. The energy crisis is something that is ongoing and getting worse, despite many efforts.

- During election years, there is a renewed debate on how "real" the energy crisis is in the world. One side will always say it is based on faulty science whereas the other side is basing their findings on political interest.
- What is really at play in the discussion about how real the energy crisis is concerns the perception of responsibility for the future. There is no real energy crisis if you are not concerned about life after your time on Earth is gone. However, there is a genuine energy crisis if you care about the future that the next generations will inherit.

Cont...

Causes

1. **Overconsumption:** The energy crisis is a result of many different strains on our natural resources, not just one. There is a strain on fossil fuels such as oil, gas, and coal due to overconsumption which then, in turn, can put a strain on our water and oxygen resources by causing pollution.
2. **Overpopulation:** Another cause of the crisis has been a steady increase in the world's population and its demands for fuel and products. No matter what type of food or products you choose to use from fair trade and organic to those made from petroleum products in a sweatshop – not one of them is made or transported without a significant drain on our energy resources.

3. **Poor Infrastructure:** Aging infrastructure of power generating equipment is yet another reason for energy shortage. Most of the energy-producing firms keep on using outdated equipment that restricts the production of energy. It is the responsibility of utilities to keep on upgrading the infrastructure and set a high standard of performance.
4. **Unexplored Renewable Energy Options:** Renewable energy still remains unused in most of the countries. Most of the energy comes from non-renewable sources like coal. It, therefore, remains the top choice to produce energy. Unless we give renewable energy a serious thought, the problem of energy crisis cannot be solved.

Mobile: +918101078393

॥ विद्यया विन्दतेऽमृतम् ॥

Cont...

Renewable energy sources can reduce our dependence on fossil fuels and also helps to reduce greenhouse gas emissions.

5. **Delay in Commissioning of Power Plants:** In a few countries, there is a significant delay in the commissioning of new power plants that can fill the gap between demand and supply of energy. The result is that old plants come under huge stress to meet the daily demand for power. When supply doesn't match demand, it results in load-shedding and breakdown.

Cont...

6. **Wastage of Energy:** In most parts of the world, people do not realize the importance of conserving energy. It is only limited to books, the internet, newspaper ads, lip service, and seminars. Unless we give it a serious thought, things are not going to change anytime sooner. Simple things like switching off fans and lights when not in use, using maximum daylight, walking instead of driving for short distances, using CFL instead of traditional bulbs, proper insulation for leakage of energy can go a long way in saving energy.
7. **Poor Distribution System:** Frequent tripping and breakdown are a result of a poor distribution system.

Cont...

8. **Major Accidents and Natural Calamities:** Major accidents like pipeline burst and natural calamities like the eruption of volcanoes, floods, earthquakes can also cause interruptions to energy supplies. The huge gap between supply and demand for energy can raise the price of essential items, which can give rise to inflation.
9. **Wars and Attacks:** Wars between countries can also hamper the supply of energy, especially if it happens in Middle East countries like Saudi Arabia, Iraq, Iran, Kuwait, UAE, or Qatar. That's what happened during the 1990 Gulf war when the price of oil reached its peak causing global shortages and created major problems for energy consumers.

Cont...

10. **Miscellaneous Factors:** Tax hikes, strikes, military coup, political events, severe hot summers or cold winters can cause a sudden increase in demand for energy and can choke supply. A strike by trade unions in an oil-producing firm can cause an energy crisis.

॥ विद्यया विन्दतेऽमृतम् ॥

Effects

1. **Environmental Effects:** Energy is produced by the burning of non-renewable fossil fuels. This does not only affect the global resources of fossil fuels, but it also affects the environment. The burning of fossil fuels releases greenhouse gases like carbon dioxide and others. These gases create a blanket on the earth's surface, which prevents the release of the short rays of the sun by night. Thus, the energy crisis facilitates making the earth a warmer place by promoting global warming.
2. **Increasing Prices of the Fuel Resources:** As the use of fossil fuels increases, the cost of these resources increases too.

Cont...

- We must remember that the quantity in which these fossil fuels are available is limited. As we keep on using these resources, the amount of these fossil fuels further decreases. With every passing day, the demand for these fuels increases daily while their available quantity decreases every day. This leads to an immense increase in the price of fossil fuels, causing the price to increase day in and day out. This creates a huge economic disturbance across the globe.
3. **Political Disturbances:** The fact that the energy crisis creates some socio-economic disturbances, also tells us that this global energy crisis also creates a lot of political disturbances across the globe. The quest for fossil fuels is one of the major causes of the same. Besides, with the

Cont...

4. **Energy Simulation:** Energy simulation software can be used by big corporate and corporations to redesign the building unit and reduce running business energy costs. Engineers, architects, and designers could use this design to come with most energy-efficient buildings and reduce carbon footprint.
5. **Perform Energy Audit:** The energy audit is a process that helps you to identify the areas where your home or office is losing energy and what steps you can take to improve energy efficiency. Energy audit, when done by a professional, can help you to reduce your carbon footprint, save energy and money, and avoid energy crisis.

Cont...

6. **Common Stand on Climate Change:** Both developed and developing countries should adopt a common stand on climate change. They should focus on reducing greenhouse gas emissions through an effective cross border mechanism. With current population growth and overconsumption of resources, the consequences of global warming and climate change cannot be ruled out. Both developed and developing countries must focus on emissions cuts to halve their emissions from current levels by 2050.

What's being done?

- There are many global initiatives that are working towards resolving the energy crisis. This has taken the form of –
 1. Increased regulation and restriction on carbon emissions,
 2. The promotion of greener manufacturing and construction projects,
 3. The funding of research into hybrid technologies and more sustainable technologies, and more.
 4. Recognizing that how the community uses their local resources is important too.

	(1) To get face to face acquaintance of the Departmental Staff (teachers and nonteaching staff) with the guardian.
	(2) To hear 'the say of the guardians' about their views about the Dept. and as well as about the teachers and staff of the Department.
	(3) To conduct an interaction session between the parents and teachers.
	(4) To get feed back from the students.

নং / No.	রেজল্যুশন / RESOLUTION ADOPTED
	Today, the 3rd January 2023, a 'parent-Teacher' meeting is being held in the Dept. of Botany at 2-30 PM. As many as nine guardians along with their wards (all are 1st semester Honors students of our Department) were present in the meeting. Also, the above signed teachers of the Department were present in the meeting. The above-mentioned agenda were discussed thoroughly. A brief is noted below:
	(1) First of all, the 'Face-to-face' acquaintance between the teachers and parents along with their wards held followed by a brief discussion (introduction by Mr. Subhasis Mandal)
	(2) A few of the guardians present in the meeting expressed their views about the teaching-learning process in the Department which is

The meeting took place as per notice. The above signed students and their guardians were present in the meeting. In this meeting teachers and parents discussed about how to improve the quality of education in the department. Here the students brought up their one difficulties that they are facing problem in the practical classes due to lack of good (new) microscope and laboratory instruments in the department. We informed this to the principal sir later and he assured us the problems will be solved soon.

क्र/No.	प्रस्तावना / RESOLUTION ADOPTED
	ward will be be benefitted by attending classes.
	In response to her suggestion, Dr. Arun Kumar Patra, HOD, informed that our mode of teaching is a blended mode where in two languages are given priority English and Bengali. As our number of student is very poor so no problems of understanding class lectures by any student. If any student points out his/her problems we always try our level best to make them students not only for language but for subject matter also.
	b) Ramendra Nath Pal, Guardian of Rahul Pal (Sem-1) says that classes are taken by the teacher regularly but if the timing of class routine may change i.e. starting time be forward back from 11:00 AM. Then it will be benefitted for his ward.
	c) Soumya Mukhopadhyay, Parents of Sulagna Mukhopadhyay says that everything is alright. He expresses his gratitude for making inviting them to this type of Meeting.
	As there is no other issue to discuss, the meeting is ended over with the vote of thanks to the chair and members.

In today's meeting nine guardians were present. Today's meeting was only for guardians of SEM I 4 years/3 years major students. Following decision has been made —

- 1) Principal sir asked the reason of poor attendance of the students & he said that from the next semester no student can appear internal exam without 5% attendance.
- 2) One of the students of SEM I, Kusuma Khanna said about her financial problem to carry on her study. Principal sir assured her that she can stay in girls' hostel free of cost & sir said her to contact them with him for that.
- 3) Students have to inform us about the reason of absent either prior to class in WhatsApp or in written in case of long absence.

In today's following decision has been taken →

- 1) Parents representative group will be formed with four/five guardians who will communicate with us & Principal sir for the betterment of the institution as well as for their child.
- 2) IQAC coordinator instructed to nominate one parent & send his/her name to Principal sir/IQAC coordinator. For this purpose we have selected Mr. Sh Narul Hagne, father of Kousha Khatun of SEM-III Honours as a representative of all the parents of geography students with his consent.
- 3) Result of SEM-1 was not satisfactory which was told by Narul Hagne. This matter may be taken seriously in future. We should take more class in excess of our due class & also students should be more attentive & in this regard guardian have a great role also. They have to look after their child in home so that they may not be addicted in smart phone.

Today's meeting was very fruitful. Total 34 guardians was present. In today's meeting following topics has been discussed.

- 1) Principal sir, our senior teacher Mita Roy Brahmachari & myself gave emphasis on the regular attendance of the students.
- 2) One of the guardian Mr. Nural Hagne alligate about the irregularity of the classes on every Thursday. He said to inform the students at the early morning if the teachers will not take class. Decision has been made in this regard & requested to all faculties to inform the students in whatsapp group.
- 3) Mr. Nural Hagne complain to the principal sir on poor quality of food in girls' hostel. Sir assured him that he will take care of this matter.

नं / No.	रेजल्यूशन / RESOLUTION ADOPTED
	Resolution of the Parents-Teacher Meeting held on 18/05/2022 at the Department of Physics, Katwa College. Time - 2:00 PM
	Parents of Sem II, and Sem IV students of our department very actively participated in the meeting. Almost all of them expressed their satisfaction about the teaching-learning process of our department.
	We the teachers were unhappy about irregular attendance of some of students. We expressed our agony about this irregularity and have tried to convince the guardians that its about the importance of regular class teaching . The Guardians told us they will look would look after the matter.
	One guardian requested us to take special classes for various admission tests like JEST, JAM etc. We the teachers assured that we shall think about it very sincerely in future.
	The meeting ended in a very joyful and mood. cordial mood.

Resolution of the Parents-Teacher meeting held on 03/01/2023 at the department of Physics, Katwa College, Time - 02:00 PM.

A parents-teacher meeting was convened to be held on 03-01-2023 at the Department of Physics, Katwa College, in which the teachers of the department of Katwa College met with the guardians of students of Sem-III & Sem-II to discuss various academic issues of their wards. We, the teachers also requested them to raise their grievances, if any, freely so that we can re-address the relevant issues.

Most of the parents expressed their satisfaction of about Teaching-Learning process of our departments and they admitted that the teachers of our department show utmost dedications towards the students.

A few guardians felt annoyed thinking about the future of their wards specially when ^{opportunities} ~~the~~ of job is very few, particularly in the field of Bio-Science. We ~~told~~ ^{assured} them not to be so hopeless for good students would have good opportunities always ~~in the~~ particularly in the field of Research.

After very cordial discussion the meeting ended in a jovial mood.

regarding the evasive attitude of their children. They also reported that they are inattentive in their studies and teachers requested them to take proper steps to resolve this matter.

Besides the aforementioned issues, some students of first semester were required for special observation due to backward backgrounds as well as they were severely suffered from nutritional deficiencies due to their wrong and unhealthy food habits.

Their parents also complained for their blood-pressure, weakness and delayed water-intake of their concerned children.

The faculties of the department of physiology helped them to overcome their difficulties by advising to intake balanced diet and ORS in a regular manner.

Overall in an amicable atmosphere, this meeting was became very successful.

regarding the evasive attitude of their children. They also reported that they are inattentive in their studies and teachers requested them to take proper steps to resolve this matter.

Besides the aforementioned issues, some students of first semester were required for special observation due to backward backgrounds as well as they were severely suffered from nutritional deficiencies due to their wrong and unhealthy food habits.

Their parents also complained for their blood-pressure, weakness and delayed water intake of their concerned children.

The faculties of the department of physiology helped them to overcome their difficulties by advising to intake balanced diet and ORS in a regular manner.

Overall in an amicable atmosphere, this meeting was became very successful.

Meeting date: 05/01/2023
Venue: department multipurpose hall. Time: 12:00 noon
Proceeding of the meeting/ resolution

Dr. Nirmalendu Sarkar, principal chairs the meeting. He addresses all the parents and faculty members present in the meeting. After greeting from both sides the discussion starts.

The parents were invited to share their views, suggestions and feedback. Several parents spoke on the following aspects:

1. Providing more library books.
Action: Parents were assured of the enhanced book requirements are already under process.
2. Making the whatsapp group to circulate the dates of the examination and other activities.
Action: Already made.
3. Few parents discussed attendance issues due to medical reason.
Action: They were informed about attendance criterion that includes medical leave.

In addition to providing feedback on their children, parents expressed their satisfaction with the department and the college's quality of education. The parent teacher meeting came to an end with the conclusion that parents and teachers must work together to ensure that children are properly nourished and progress.

MEETING RESOLUTION BOOK

Meeting No :
Venue : Departmental Multipurpose Hall.

Date : 06.12.2023
Time : 12.00 Noon

Proceedings of the meeting / Resolution

Dr. Nirmalendu Sarkar, Principal chairs the meeting. He addresses all the parents and faculty members present in the meeting. After greetings from both side the discussion starts.

Confirmation of previous meeting : with the permission of the principal, Convenor Ms. Siuli Mandi reads the resolution of previous meeting and it confirms unanimously.

The Principal informs that our college is going to face the NAAC peer Team shortly, in view to get better accreditation by the component authority, various initiatives are being taken. It is necessary to select a parent representative among the members present, and forward the name, address and contact number to the IQAC and NAAC (if necessary), that they can communicate with the parent for academic and administrative purpose related to our department. After through discussion following person is selected as a Parent Representative unanimously.

Name of the Parent Representative : Sadhana Kundu
Relationship with B.Ed. Department : Mother of Biswajit Kundu, Student of session 2023-25
Address : At + PO - Katwa, Dist : Purba Bardhaman
Contact No : 9883272854

In response the requests from the Principal and the Convenor following enquires are discussed :

1. A parent enquires about the present status of the department B.Ed. College, as some news regarding cancellation of recognition related to some B.Ed. Colleges in West Bengal has been published by some electronic and printed media. The Principal assured all that, there are nothing to worry for our college. Requisite recognition and affiliation has already been taken from component authority.
2. A parent named Mr. Shubash Ch. Mondal requests to reduce the amount of course fee. As it is the matter of Governing Body, the Principal informs that he will discuss it at the meeting of Apex Body. He also informs that Rs-5000/- per academic year had already been reduced at the time of COVID.
3. A parent named Amit Kr. Mondal states his satisfaction about various kinds of academic and Co-curricular activities of the department.
4. A parent named Sushil Ch. Dey requests for some flexibility about the time of reaching classes, as many of students come from far away & it is very difficult to them to reach at exact class time. The Principal informs that the B.Ed. department is running at morning shift which was clearly informed at the time of admission and a student will have to be fulfil the norms and guidelines provided by the NCTE. He suggests them to enjoy college hostel facility to rid of this problem.
5. Mr. Basudeb Ghosh, parent of a departmental student applaud the initiative of Parent-Teacher meeting. He also wishes that the same kind of meeting should be held more in future.
6. A parent wants to know about biometric attendance system. Mr. Suraj Sarkar describes the procedure of biometric attendance system in detail. He also enlighten that, month wise attendance report are uploaded in departmental website, which can be access very easily by anyone.
7. A parent named Tapas Kr. Dhar enlighten about some infrastructural facility related to B.Ed. department are to be developed. The Principal assures that all will be done as early as possible.
8. Mr. Dhar also requests to conduct a short term computer course under the supervision of the college. Mr. Suraj Sarkar informs that, an Add-On course named 'Basic Computer Training' is going to be conducted shortly. Students can admit in the Add-On course when notice will be circulated.

The parents wanted to know the opportunities of the subject. The teachers discussed on the potential area. The father of Manisha Ghosh pointed out that her daughter was not capable of understanding mathematical approach. The mother of Sangita wanted special care to his daughter since she was lacking in the paper title microeconomics. The remaining parents appealed to the teachers to take care of their sons/daughters so that they can shine in life.

Actions to be taken from Teachers' part:
The existing teachers confirmed the parents that they will be definitely taken to solve the problems of the above mentioned students in particular & all the students in general.

Resolution

Head of the department, Prof. Syed Abul Kadar chaired the Parents Teachers meeting at room no-101 on 6/1/2020.

In the beginning Prof. Syed Abul Kadar welcomed the new students and their parents in the department of Political Science. At the same time, he informed about the future prospects of the students of political science. He urged the parents to attend the classes of their children.

All the teachers of the department assured to support them in their studies.

Principal, Dr. Nirmalendu Sarkar asked the students to take extra precaution in their social life and also asked the parents to keep an eye on the negativity of social media.

Parents are happy to get all kind of assurance from our end.

Prof. Syed Abul Kadar ended the meeting by thanking everyone.

Resolution

Head of the Department, Prof. Syed Abul Kadar chaired the Parent-Teacher's meeting at auditorium hall on 9-1-2024.

He urged all the Parents to tell if their children are having any academic Problem. Also are you having any Problems to run their education? We the teachers are with you. You can also openly say something that our Students not be able to say, but by sharing with you what ever we are serving them properly or not.

The parents all reported good experience about the department. Many have no one to help them with reading, most of the students are from very poor families; some parents work as farmers, small traders, house wife, even day labour. They request a little extra attention for their children. Many students have to help their parents in their housework. Therefore if they are absent from class for a day or two, we teachers should help them.

One parent demanded to increase library access.

Three other teachers of our department - Prof. Punabi Kundu, Prof. Sariful Islam and Prof. Rahul Das assured the parents in their discussion that all kinds of cooperation will be provided.

Principal, Dr. Nirmalendu Sankar attended the meeting and promised to solve the library Problem.

Prof. Syed Abul Kadar ended the meeting by thanking everyone.

বিবরণ

Dr. Kedar Nath Mitra, HOD, Chemistry department chaired the meeting.

Dr. Mitra requests Dr. Dinesh Maity to convene the meeting.

Dr. Maity requests the HOD to deliver the welcome address.

Dr. Mitra delivers welcome all the guardians to the department. He also welcomes the teaching and non-teaching staff of the department. In his welcome address he gives emphasis on regular attendance of the students to both theoretical and practical classes. He also states that the department, working within various constraints, gives maximum possible effort to serve and secure the academic interests of the students.

After the welcome address by Dr. Mitra requests the guardians to opinions, suggestions and dissatisfaction, if any.

The guardians altogether express their satisfaction teaching-learning environment and the guidance provided to the students.

विषय विवरण

Jayanta Kumar Sen (Sourmisena 2nd year 4th Sem)
Sumantra Kumar Pal (Sourmisena 2nd year)

Dr. Kedar Nath Mitra, HOD, Chemistry presides over the meeting. Dr. Himaleswar Sankar, Principal, Katwa College and Prof. Utpal Das, IQAC Coordinator, Katwa College are present as distinguished guests. Dr. Gouram Sankar, Assistant Professor, Chemistry convenes the meeting.

Dr. Mitra asks the Principal and the IQAC Coordinator to address the guardians present in the meeting. Both praise the teaching-learning environment of the department and seek co-operation and constructive suggestions from the guardians.

Dr. Sankar requests all guardians one by one to place their views. Following issues are raised:-

- necessity of off-line classes
- offline examination
- allotment of tiffin hour
- co-ordination between central and departmental libraries
- counselling of students by teachers
- free ships and scholarships
- extension of practical classes upto evening
- security of girl students reaching home after college etc.

Mr. Raktim Chatterjee, Mr. Jayanta Sen, Mr. Anirban Das Choudhury, Mr. Arijit Bhattacharya etc. give various suggestions on the above issues.

Dr. Saptarshi Binsas gives emphasis of exploiting the departmental library.

Dr. Bineth Maiti talks on free ships and scholarships. Mr. Siddhartha Maji explains the cause of long duration of practical classes. He mentions that tiffin break is given to the students despite there is no provision of lunch break in the master routine.

Guardians express their eager to get informed about the performance of their son/daughter.

Dr. Mitra responds to all the issues raised in the meeting and meets the queries categorically and seeks their vigilance on the performance of their offspring. He also requests them to keep in touch with the departmental teachers and get informed about their child.

The meeting is ended with vote of thank to the chairman Dr. Mitra.

of the department.
After the welcome address Dr. Nandi requests the Principal to give his speech.
The Principal expresses his pleasure about the academic atmosphere of the department and requests the guardians present in the meeting to provide constructive suggestions for the development of the department and the college as a whole.
After Principal's speech, Dr. Nandi requests the guardians one by one to place their opinions.
Each guardian enquires about his/her son/daughter's performance.
All guardians express their satisfaction regarding the teaching-learning atmosphere of the department.
All the teachers including Dr. Nandi and Dr. Mitra shares their experiences about the performance of the students, their lacuna, and probable reasons of those lacuna and suggestions for recovery.
Beside these general discussions, some issues are raised by some guardians. These are -
• requirement of hostel accommodation for students coming from remote places
• fear of ragging among the students and guardians
• problems of communication between Katwa and remote villages
• security of girl students during their return journey to their respective homes after day-long class schedule.
The issue of hostel accommodation and ragging is referred to the Principal. The Principal advises the guardians to instruct their son/daughter to submit application for hostel accommodation and assure them that he will himself is bound to unroot ragging from both the hostels if any such incident comes to his knowledge.
All the teachers seeks guardians' attention and care to keep their daughter/son from mobile and social media as much possible since the teachers think that this is one of the major ways to find the missing link between the learner and her/his studies.
Guardians in response, request the teachers to
